

Module 10 - Scenarios for “HIV”

Recommendations R1 and R2 were translated into two scenarios:

- Scenario 1: Testing (one VCT) for most-at-risk people, check-up (two viral loads and CD4 counts) for all HIV-positive people, ARV treatment (line 1 or 2) for those who are HIV-positive in need of treatment;
- Scenario 3: VCT twice per year for sexually active population, check-up (two viral loads and CD4 counts) for all HIV-positive people, ARV treatment for those who are HIV-positive in need of treatment, including transportation costs.

Recommendation R3 was translated into scenario 2:

- Scenario 2: HIV testing (one VCT) and MTCT prevention, syphilis testing, and antibiotic treatment for all pregnant women.
